

energy in fuels

ROCK CLIMBING COOT ROCKS!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Our climbing shoes, Dodge Caravans, mountain guide, and Dwayne "The ROCK" Johnson run entirely on ENERGY.

Dwayne's metabolic energy is obviously different than the gasoline used to manufacture and run material possessions. However, Dwayne eats food (muscle milk) that uses the same resources as the van and climbing shoes. So does his family.

The mission of "THE ROCKING COOT" is to compare both renewable and non-renewable resources and their impact on our environment, lifestyle, and future.

Types of resources:

Renewable

Biomass

Water

Wind

Solar

Heat - thermal and geothermal

Hydrogen

Ethanol

Non-Renewable

Gasoline

Coal

Methane(ol)

Biodiesel

Dwayne "The Rock" Johnson
