

Curriculum Computing

It is the totality of student and instructor experiences that occur in the process of using computation in the educational process. We provide services to students, staff and faculty that include:

- desktop (commodity) computing
- storage and transfer pathways for instructional data.
- set up and maintain the following:
 - computer interfaces of instruments
 - computers in teaching laboratories (configure, install and update applications)
 - license servers for teaching and learning
- consulting services on software and application compatibility with operating system environment
- curriculum computing best practices and workshops on demand.
