

Cancer and Cancer Research - A Look Back and a Look Ahead

Instructor: Prof. Kevin Rice, Chemistry

Please [contact Prof. Rice](#) if you have any questions about this page or have any difficulty accessing content.

What is cancer?

Cancer is not a single disease, but rather a myriad diseases all characterized by abnormal, unregulated cell growth. Our understanding of cancer mirrors our ability to develop new treatment methods. In this class, "Cancer Research - A Look Back and a Look Ahead", we'll explore our evolving understanding of this ubiquitous human malady.

Assignment:

In each of the following links, you'll find a reading assignment and instructions. Please complete the assignment in each link. (The "Look Back" page has a legthier reading assignment)
