

May 22 - East and North Sampling

Colby and UMO researchers sampled both East and North Ponds on 5/22/2008. Both lake are well mixed with temperature at 15 oC. Secchi depths in East Pond have deepened to over over 5 meters with North Pond Secchi at a little over 3 meters. A thermistor array was deployed in the middle of North Pond to record temperatures at eight depths every 10 minutes through the summer season.
