

Cole LaPlante's Project 11

Cole LaPlante's Project 11

Abstract:

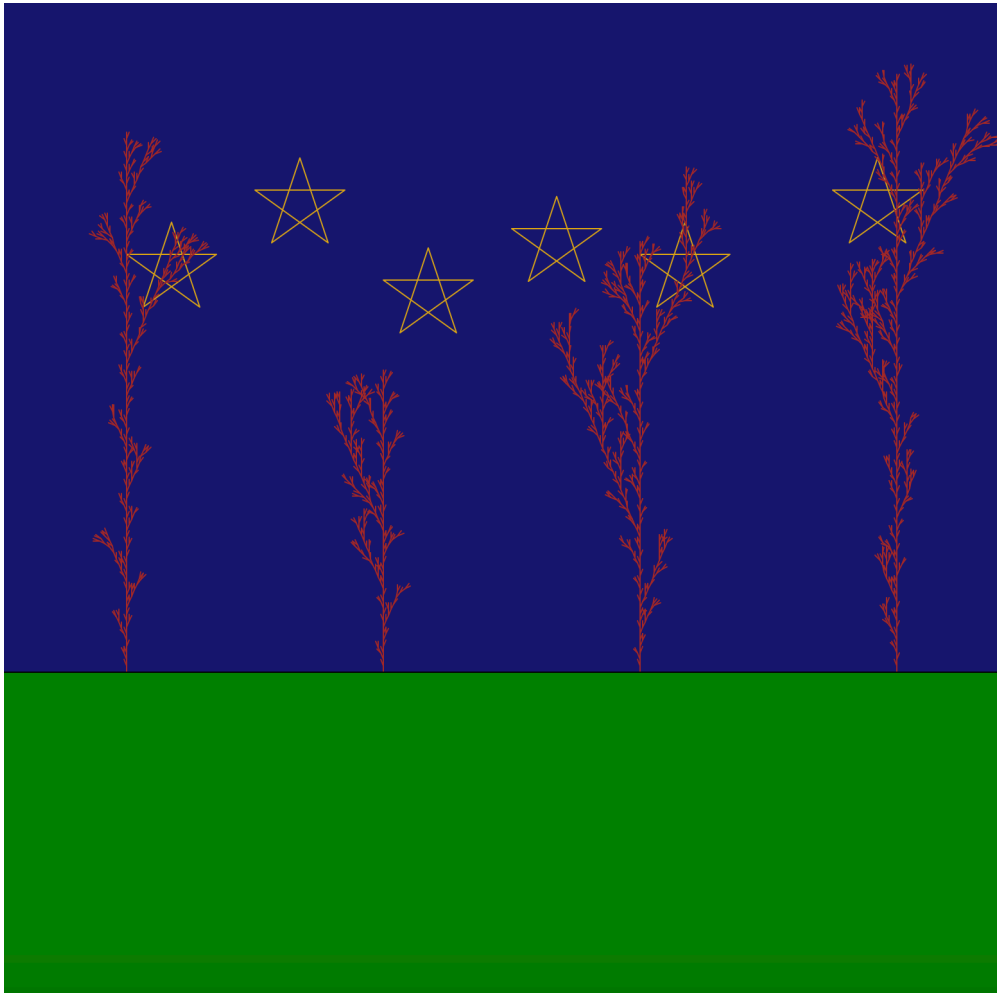

This project was essentially the same as the previous ones, but we added recursion to the mix. We used the shapes module that we previously created, and we used classes and l-systems to create pictures.

Task 1:

I used recursion here to create some sort of entrance to the castle. I created mountains and a nighttime scene to make it look better.

Task 2:

In this scene I reused the background I had just created, and I created a starry scene with trees. I wanted to incorporate I-systems into my final scene, so that's why I added trees.

Conclusion:

This project was interesting, and much more open ended than the previous ones. It was a nice ending to the course to be able to include all aspects of coding that we've learned.
