

On Friday, 10/13, at 11 AM in Davis 301

Drs. Brittany Thomas Goods and John Goods.

“Chemistry (and Biology!) after Colby”

Brittany majored in Biology at Colby and received her PhD from MIT in Biological Engineering in the lab of Professor Chris Love, where she studied T cell dysfunction in the neuro-immune diseases multiple sclerosis (MS) and glioblastoma. She is currently pursuing her postdoctorate studies in the lab of Professor Alex Shalek at the Broad Institute and MIT, where she is using single cell and systems biology approaches to understand altered immune landscapes and cell-cell communication in health and disease.

John majored in Chemistry at Colby and received his PhD from MIT in Chemistry in the lab of Professor Timothy Swager, where he studied nano materials chemistry focusing on nanotubes and graphene. He is currently leads research and development efforts at C2Sense, a Cambridge, MA based gas sensing start up company.

Both John and Brittany will be available at 4 PM in the second floor conference room of the new DavisConnects building to answer questions on graduate and career opportunities in the sciences.
