

SIRI - Shadow Image Rendering Installation

Our project is a drawing visualization created by Scott Franchi, Matthew Burton, Elena Kirillova, Victoria Tisdale and Edward Chuang.

Design concept. We want people to be able to paintlessly finger-paint. The Audience will be college students. The interaction will allow many people to interact with the installation and will be able to draw together. What is drawn will be projected on to a large, visible screen.

To see information on our project see our [Concept](#) page.

These are the [Requirements](#) for our project.

For our project each member will be serving these [Roles](#).
