

10.5 file weirdness

I ran into my first real problem with fileserver1 and 10.4 to 10.5.

This involved <http://arstechnica.com/reviews/os/mac-os-x-10-5.ars/11> extended file attribute information being lost.

Here is an ls -l

```
-rwx----- 1 daslab staff 2224 Jun 24 11:12 O18label.bad
-rwx----- 1 daslab staff 542 Jun 24 10:26 O18_anskeys
-rw-r--r--@ 1 daslab staff 45568 Jun 24 09:17 RetreatAbstract.doc
-rw-r--r--@ 1 daslab staff 75776 Jun 23 15:11 Chemical Inventory.xls
-rwxrwxrwx@ 1 daslab staff 2224 Jun 19 00:10 O18label
```

The first and last files are of interest. The first one will not open correctly (in scifinder) the last works fine. The first one went through fileserver1, the second used a thumb drive. I repeated the process using netapp-filer03b and it worked correctly.

Note the bite counts are identical.
