

What's New in Confluence 3.0

Visually

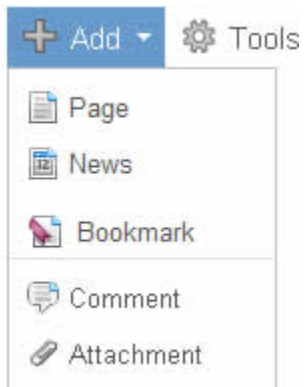

If you used the default theme, your old pages look like this:

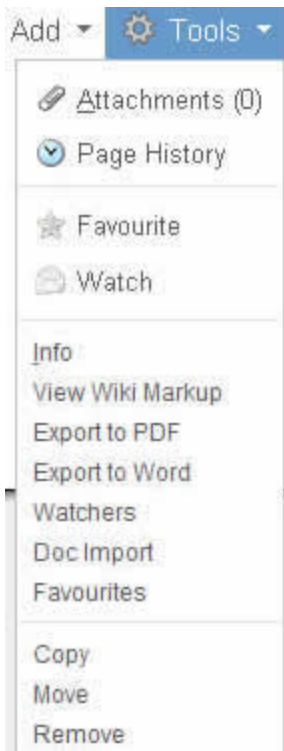

After the upgrade, the default theme looks like this:

1. The **BROWSE** command has moved to the top-right of the page
2. The **EDIT**, **ADD**, **HISTORY** and **TOOLS** have been consolidated and moved to the right-hand side of the page under the new **TOOLS** dropdown

3. Adding **LABELS** is now a more intuitive link

New Macros

Confluence 3.0 introduces the Macro Browser, a new way for users of all experience levels to build content-rich pages in seconds. The macro browser exposes the macros in your Confluence site - charts, task lists, photo galleries, RSS feeds and more - through a point-and-click graphical interface.

Contact [Ellen Freeman](#) for more information and a consultation on how you might employ some of the new macros on your site.
