

King Data Page

Data Page for King's Section - Sea Kayaking/White Water Kayaking Orientation Groups

Each student should enter their own data in a table below and post at least one photograph of the stuff they are bringing to college. For all objects please estimate the mass and volume of each group of items (clothing, electronics, bedding, books, etc). For all electrically powered devices make a more specific list describing each item by name, function, and power consumption (amps, volts, or watts). Finally, indicate your mode of travel and distance traveled. (tip: add pictures last, scale pictures by dragging from the corners, and use the align option during "attachment")

Post new data here as a Wiki comment. Please see my demonstration comment below. Each student should add their own comment with their own data.
